

Quick guide

API access for Billing Solutions

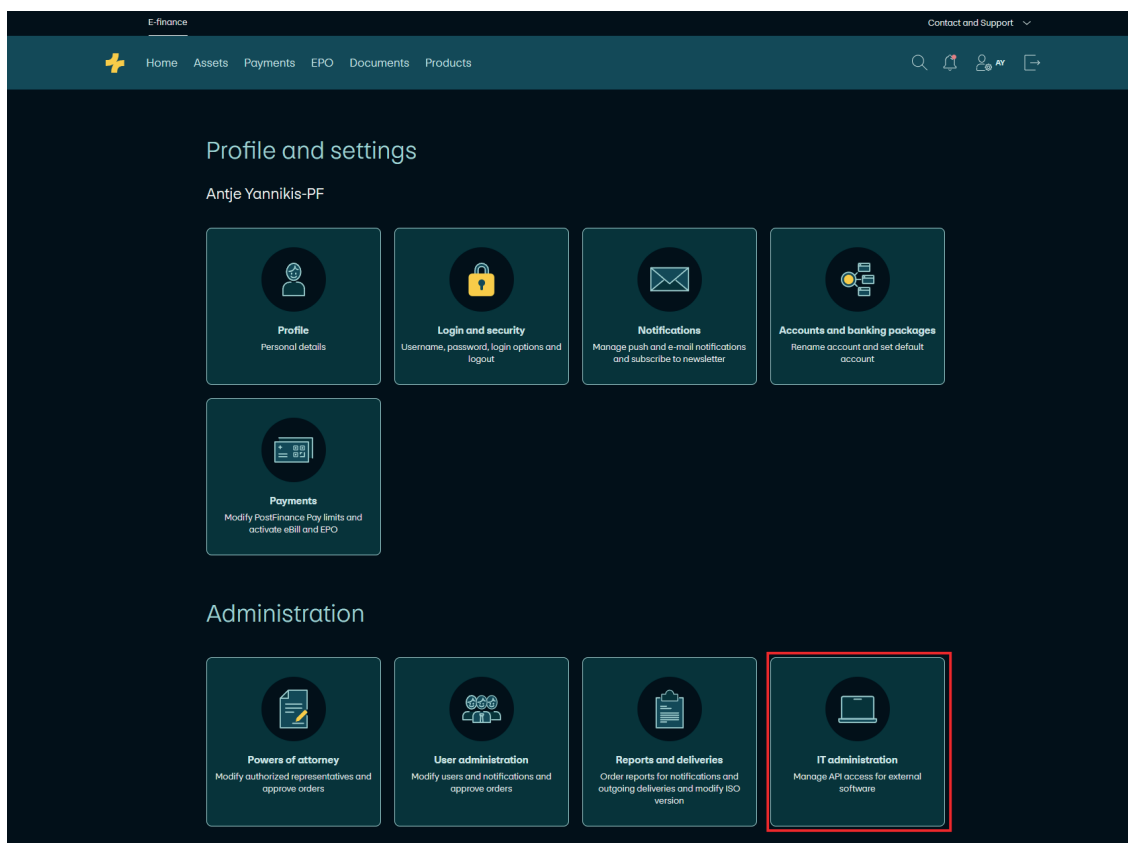

This quick guide shows you how you can create an API access yourself in e-finance.

Important note: you will need this API access only if you want to connect to our billing products via the RESTful API. This type of access is required for authentication for security reasons.

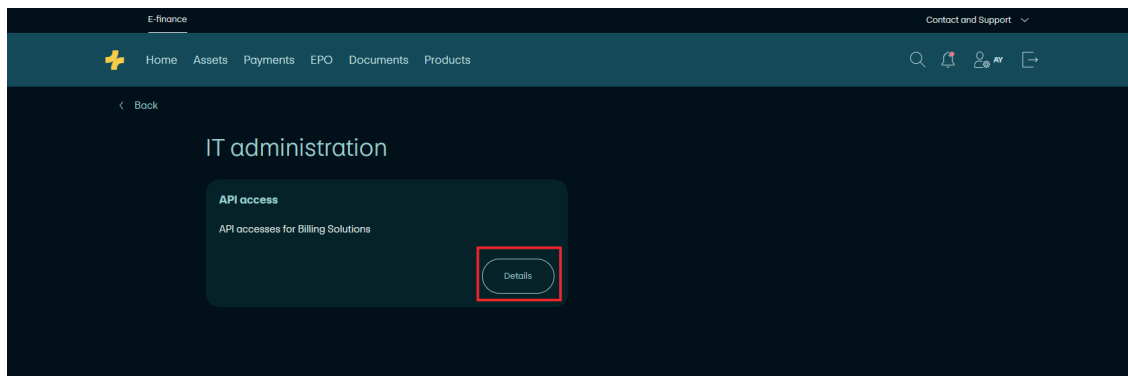

API accesses can be created by Admin Users in e-finance under user administration. To do so, please follow the images and click on the marked area.

If you do not see the “Administration” area, please contact your e-finance admin user.

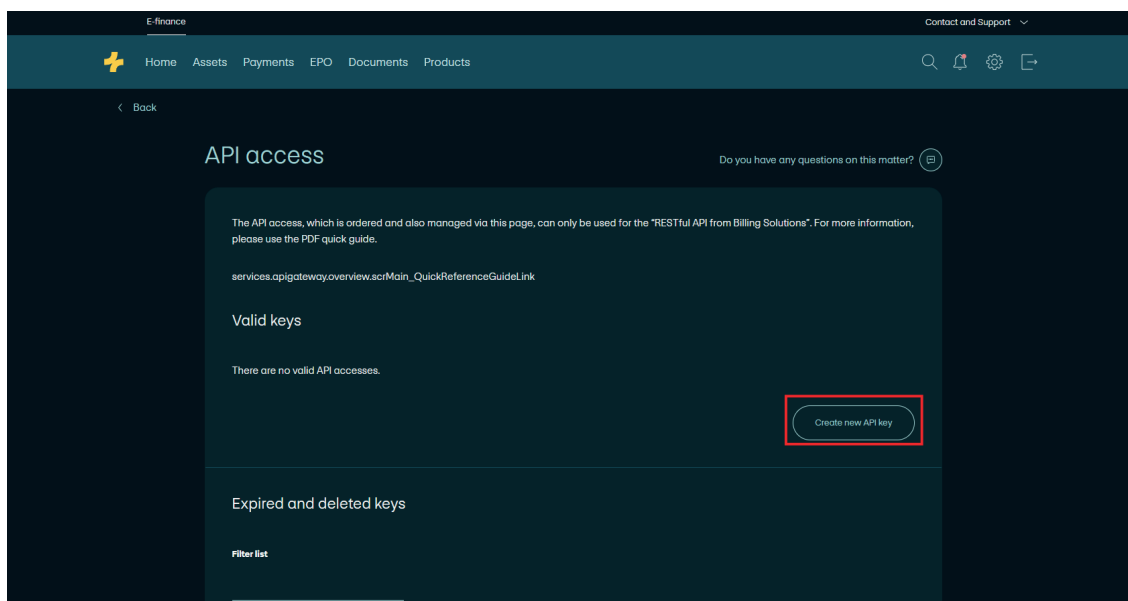

Click on “Details” to start the process.

Now you will either see the screen below, in which case you can create a new API key, or you will see the valid and expired/deleted keys (a key is valid for two years maximum). Valid keys can be deleted and can then be viewed in the lower half of the image under “expired and deleted keys”.

Please note: a deleted key cannot be reactivated!

Please click on “Create new API key”

On this page, you can now make various entries:

- *User ID*: The drop-down menu lists all of the users who are also visible in “user administration”. Users for whom an API access has already been created will also appear (a user can have multiple API accesses). Choose a user for whom you wish to create an API access.
- *API*:
 - “Billing Solutions” = productive environment
 - “Billing Solutions customer integration” = customer integration for tests
- *Note*: You can add any notes here.

Click on “Create” to create your key for the RESTful API.

Create new API access

Do you have any questions on this matter?

Select the user to whom API access should be assigned.

User ID

user01

API

Billing Solutions

Note (optional)

Important note: once created, API keys are only displayed once. Enter the keys into your external software directly and avoid saving them in folders shared with other parties (e.g. SharePoint). Never disclose the keys to anyone else and do not send them by e-mail.

Cancel

Create

The API keys for your access have now been created. Please integrate these keys into your RESTful API to be able to submit billing documents. Please note that, for security reasons, these keys can only be copied once. Once you click on “Close”, the keys will no longer be displayed. You may need to delete these keys and create new ones.
